

EGGNOVO

COMPANY NEWS AND UPDATES

EXTENDED PRODUCT RANGE

TO BETTER SUIT OUR CUSTOMERS NEEDS

A hard work of researching has enabled EggNovo to improve the physical properties of the standard Ovomet®. Thus, we have developed new Ovomet® grades maintaining the natural composition of the original one.

The wide product variety of EggNovo helps customers to choose the one that better fit their manufacturing process conditions.

OVOMET® HD

An **increased density** combined with the low recommended daily dosage of Ovomet® allows our costumers either **to introduce the whole daily dose into a small capsule or to combine it with additional ingredients without upsizing the capsule.**

OVOMET® HF

An **improven flowability** will enhance the manufacturing processes of **tablets.**

OVOMET® AS

Highly water and oil dispersible product. **Specially meant for softgels, gummies, jellies or instant beverages.**

Same grades are available for  ovoDem®

Feel free to ask us for technical documentation or samples of this new products.

Please keep in mind that due to the extra processing these new grades may require longer lead times and increased prices.
