

AMINO 16

A plant strengthener that supports plant development as a biostimulator. AMINO 16 is a highly concentrated solution of plant L-amino acids and can be combined with pesticides and foliar fertilizers. It is used in all phases of plant growth and has a positive impact on the growth of crop production on fields, in greenhouses and orchards, while being environmentally friendly and safe for the manufacturer and the user.

Qualitative benefit arguments for all crops

- allows almost residue-free crops
- reduces nitrate residues in the soil
- increases plant uniformity and reduces nitrate content in leaf tissue
- promotes higher sugar content of fruits
- improves effectiveness of fertilizers / pesticides

Additional effects AMINO 16 in cereals

- increases protein content of cereal grains
- increases average seed weight

Additional effect AMINO 16 in corn

- raises specific weight of corn kernels

Additional effects AMINO 16 in sugar beets

- optimum yield / increase of the sugar content
